

Care Plus® Hadex® is a drinking water disinfection system that kills bacteria. It has no effect on protozoa (single-celled organisms). The use of Care Plus® Hadex® is recommended where there are concerns about the bacteriological reliability of drinking water from taps, springs, and wells that is intended in principle for consumption.

Care Plus® Hadex® consists of a properly balanced chlorine solution. Only two drops in a glass of water (0.2 liters) is needed for consumption. After 30 minutes, the water is purified and the chlorine taste and odour gone. This product is highly effective and can be used for longer consecutive periods.

Availability depends on the local Biocide Regulations.

## IN SHORT

- Very effective drinking water disinfectant.
- Disinfects water from taps, springs, wells and water tanks (camper, boat and caravan).
- Kills bacteria.
- Can be used successively over a long period.
- Convenient dosage (two drops for a glass of water).
