

Care Plus® non-impregnated bed nets provide optimum protection against insects and other arthropods. Stinging insects can disrupt a good night's sleep. A non-impregnated mosquito bed net is suitable for use in the home, trips within Europe and to destinations that do not pose a malaria risk. Non-impregnated nets are suitable for babies and young children.

Care Plus® bed nets are made from durable polyester fibre. All non-impregnated bed nets are machine washable up until 40°C. Preferably use a chlorine-free washing detergent. Always store the net in its accompanying bag in a dark place.

Head nets of Care Plus® are very fine-meshed and designed for hiking, fishing and camping. The fine mesh of the net helps prevent these tiny insects from passing through it. It is recommended to keep distance between net and the skin.

IN SHORT

- Perfect for home use and areas without a malaria risk
- Protection against insects and other arthropods
- Stable shape
